Integrated Program Management Solution

- Our project aims to develop a comprehensive, web-based application that will serve as the central hub for managing commercial real estate projects.
- The goal is to create a holistic project management solution that is streamlined and captures most project management lifecycle workstreams.

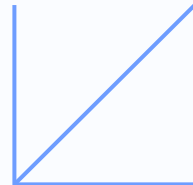

Requirements

- Track financial changes for contract amendments and budgets.
- Define and baseline project scopes, schedules, and budgets.
- Estimate, allocate, and control project costs.
- Allow vendors to upload and submit expense invoices.
- Review and approve expenses for budget tracking.
- Provide clients with a project dashboard.
- Dashboard shows project timeline, expenses, and status.

Deliverables

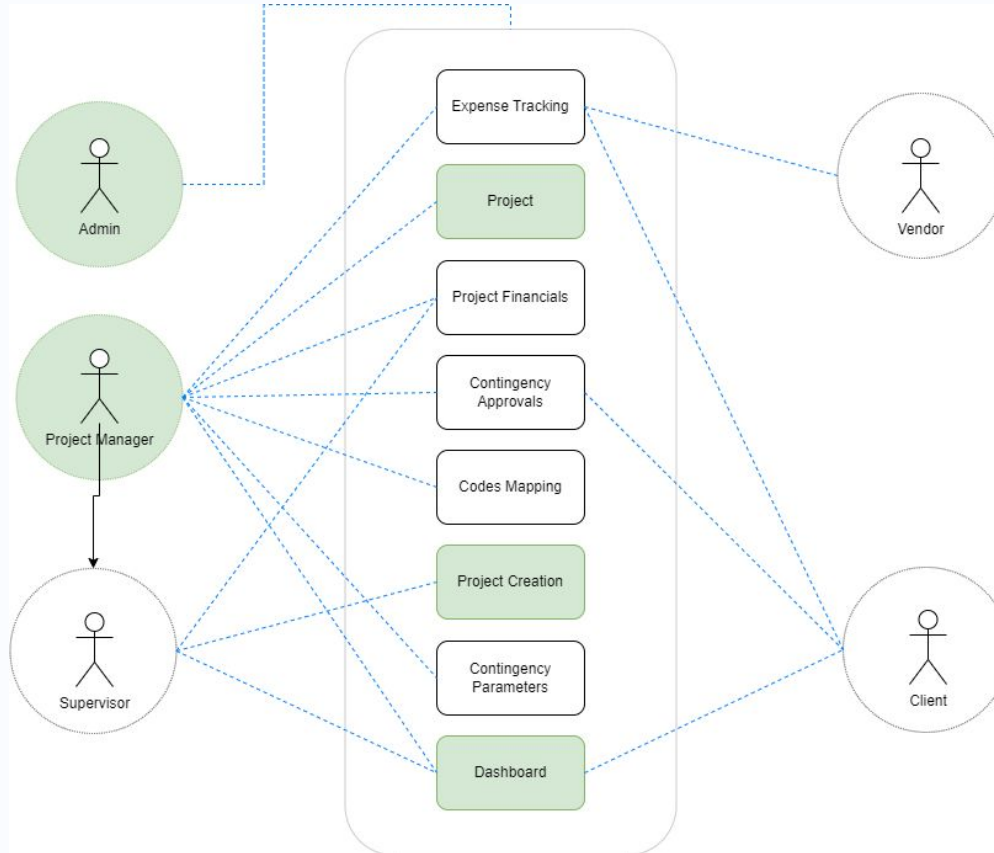

- Develop a sophisticated and user-friendly application to replace the spreadsheet-based approach.
 - Ensure the application covers project initiation to closeout phases.
 - Provide comprehensive source code and system documentation for future maintenance and enhancements.
 - Produce a final project report outlining the work completed, challenges encountered, solutions applied, and recommendations for future improvements.
- 
- 
- 

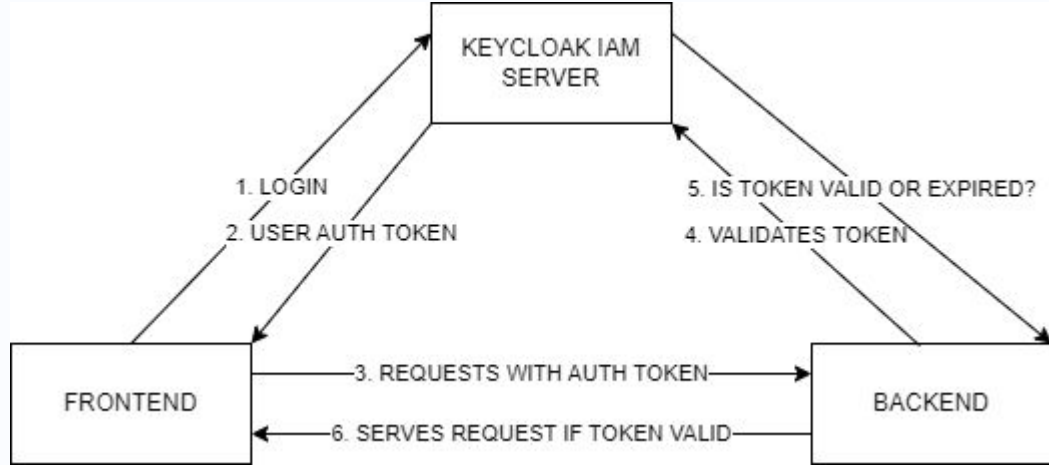

Backend

User Interaction Diagram

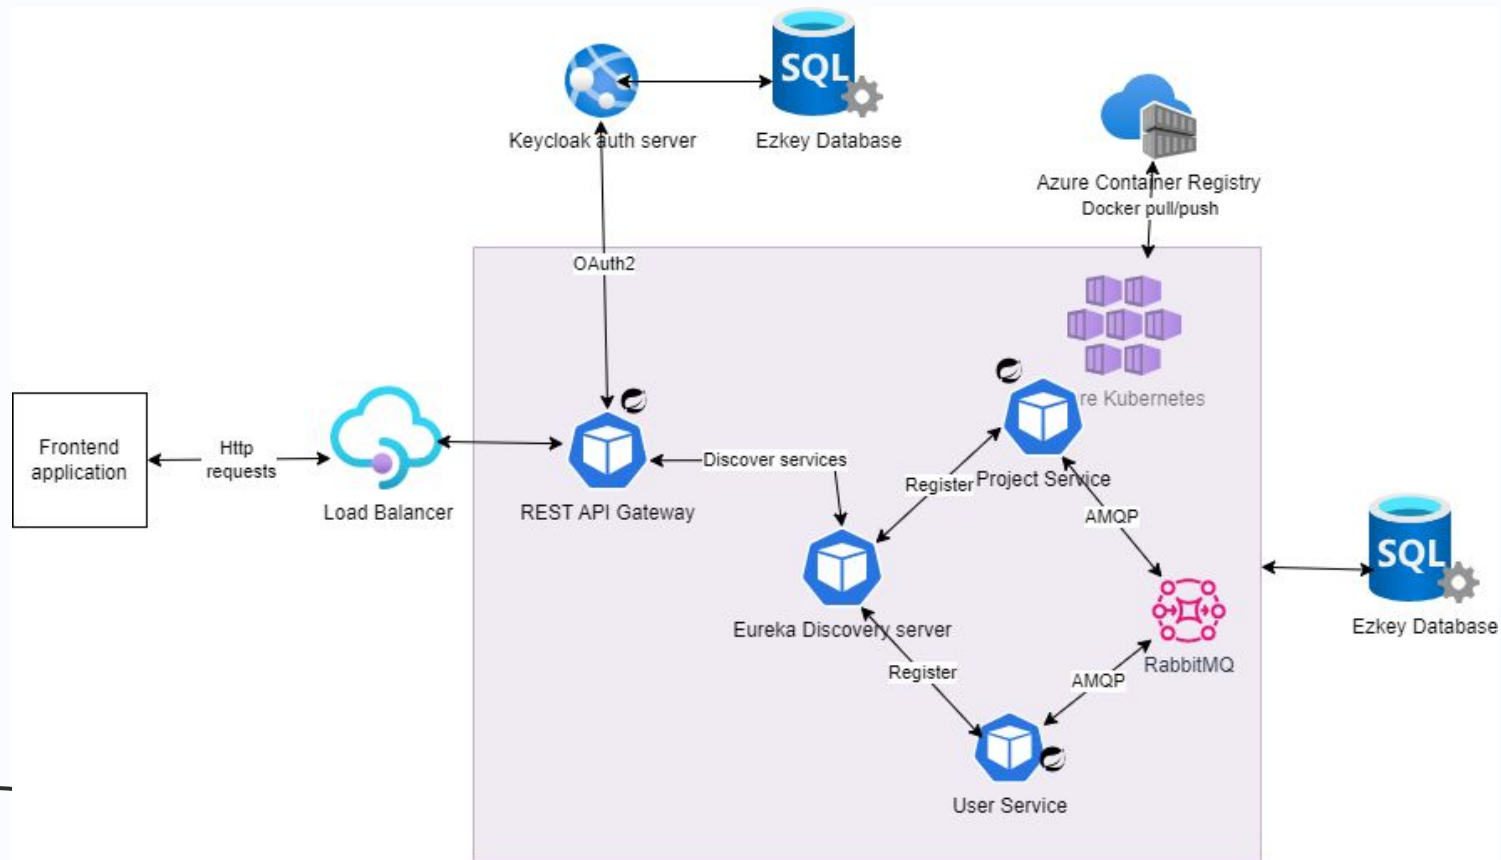

User Access and Security

- Keycloak Login and Session Management
- Keycloak IAM OAuth2 Server with Spring security
- Role Based Access Control (RBAC) with spring security

Architecture Diagram

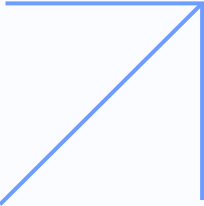

Database

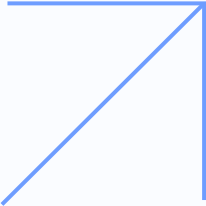

1. Requirement Analysis

- 
- Collaborate with Clark and Frank to understand the data and database requirements
 - Understanding domain
 - Identify Entities and Relationships
- 
- 

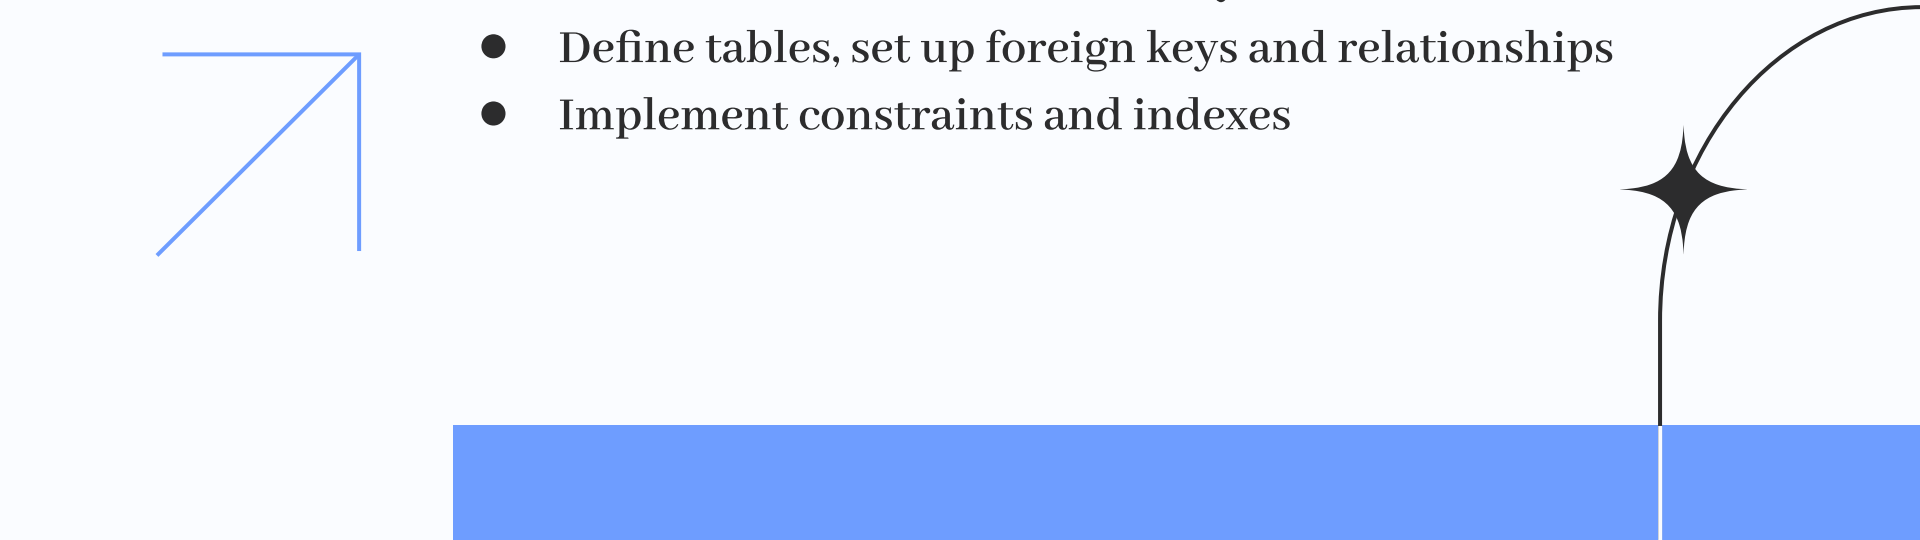

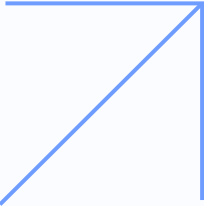

2. Database Design

- Create a detailed ERD
 - Define constraints (unique, not null, foreign keys)
 - Normalization
- 
- 

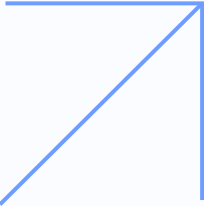

3. Database Setup

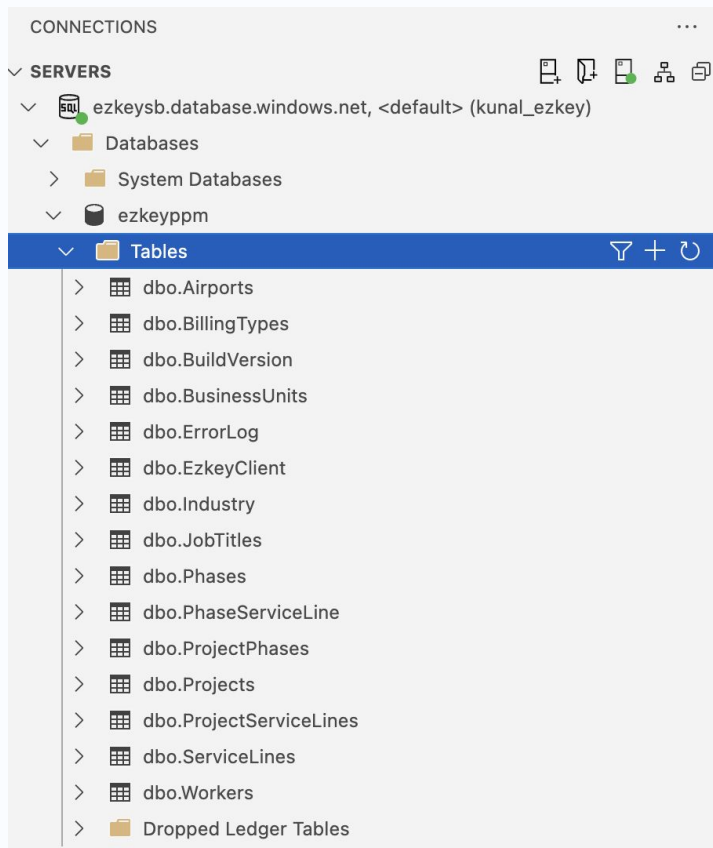

- 
- 
- Create the database in Azure SQL Database
 - Define tables, set up foreign keys and relationships
 - Implement constraints and indexes

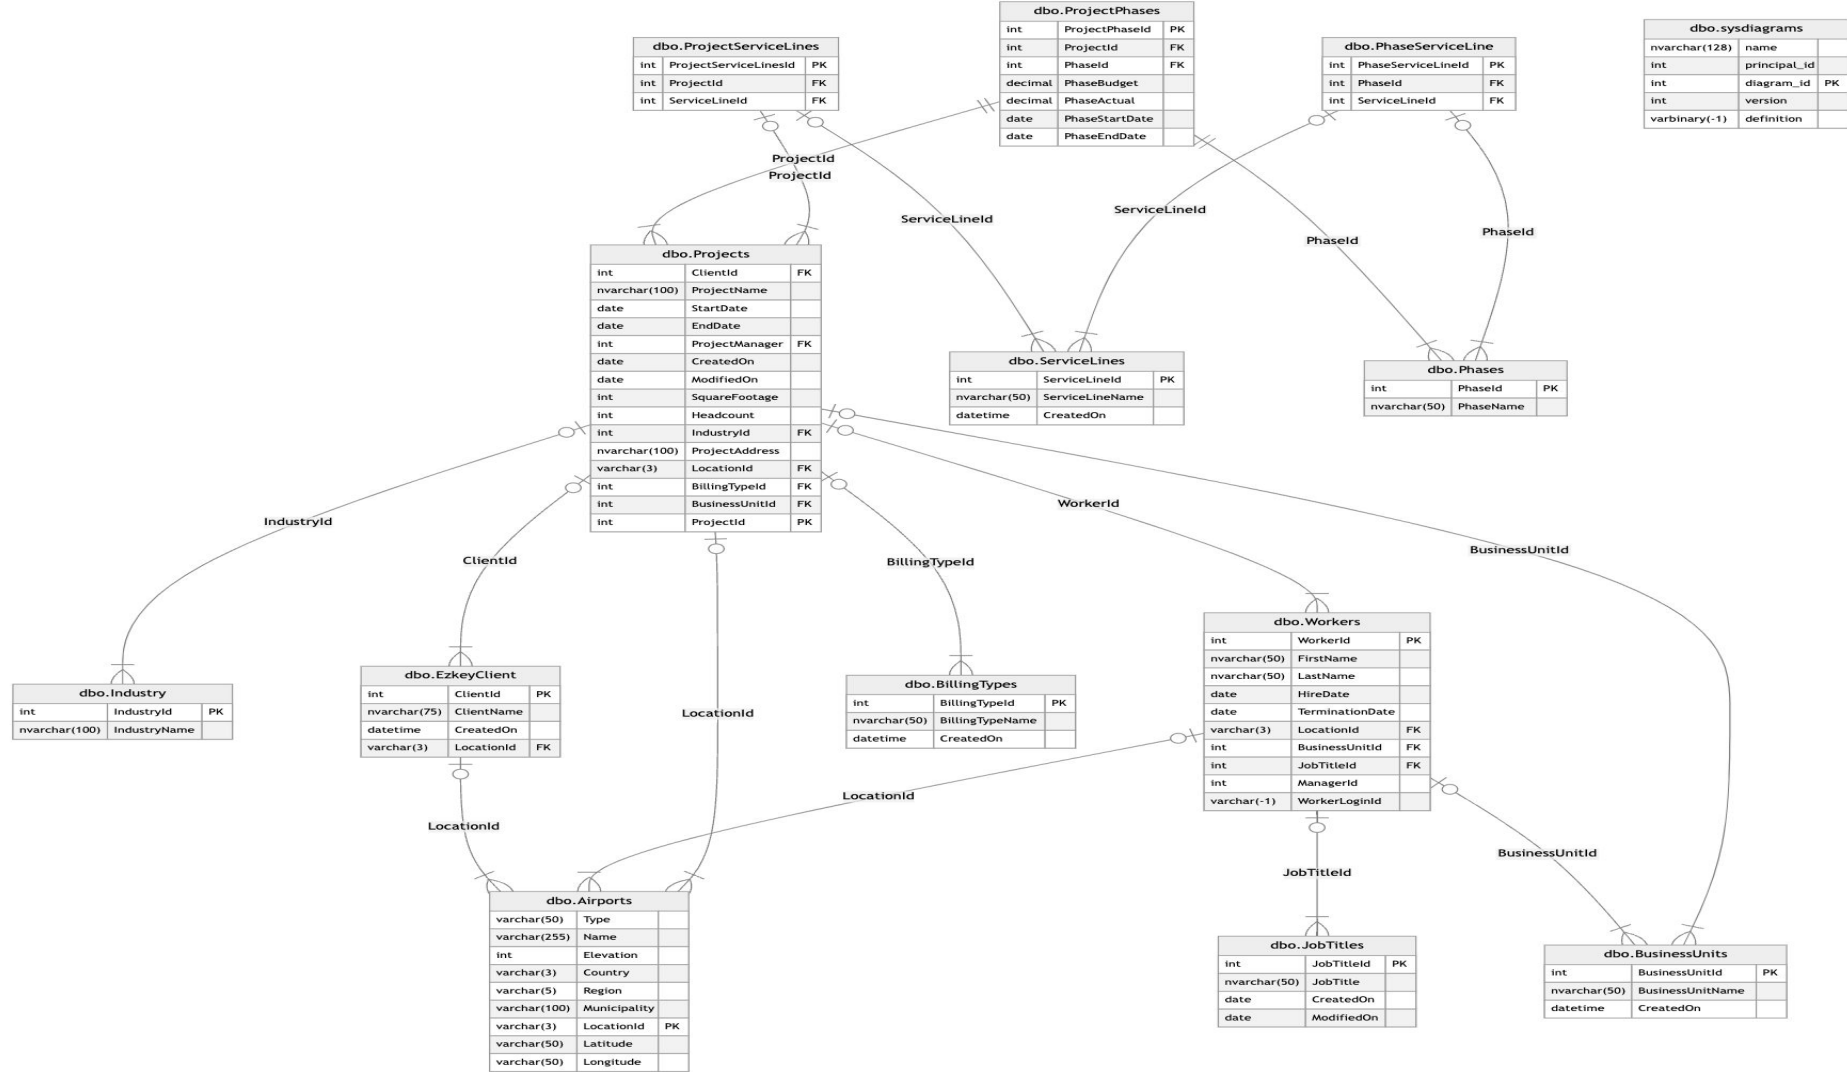

4. Data Management

- Develop data insertion scripts, populating records
 - Perform unit testing and validate performance
 - Maintain data consistency
- 
- 

Tables

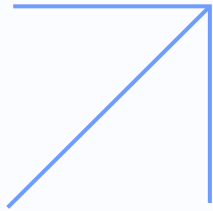

Frontend

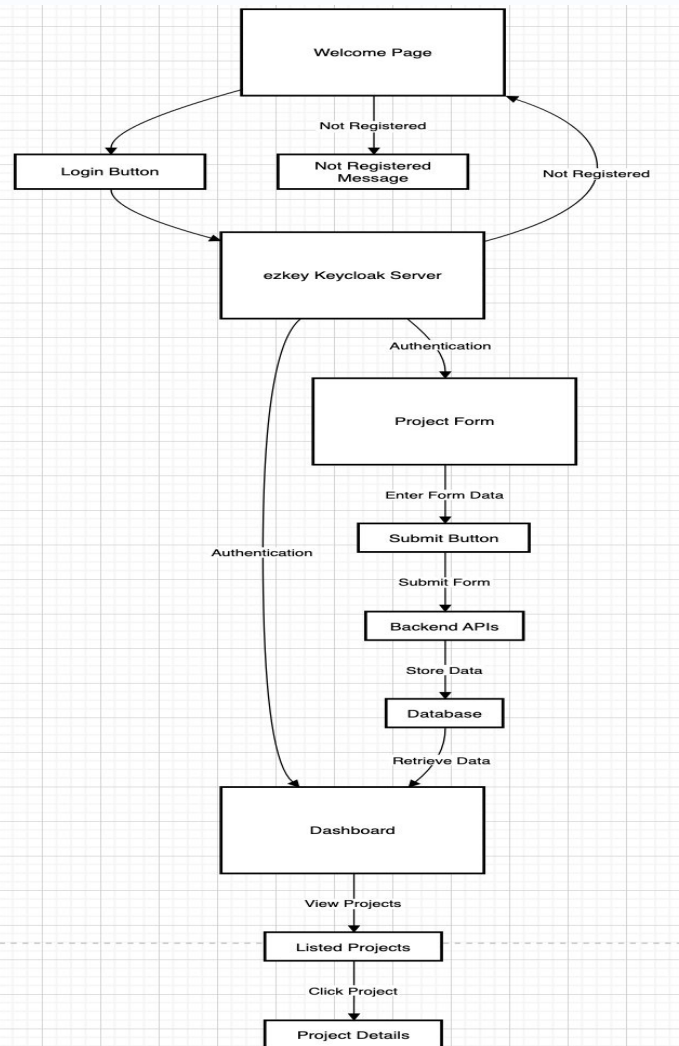

Frontend Technologies

- JavaScript- Programming Language
 - CSS - Styling
 - React- UI Framework
 - Npm - Package Manager
 - Axios - HTTP Library
 - Git - Version Control
- 
-

Challenges

Challenges/Opportunities

Frontend/Backend

Limited
experience with
the tech stack

Skill sets
expanded

Debugging and
testing a system
with limited
resources

Valuable
insight into the
industry

Database

Gathering
business
requirements

Thoroughly
understood the
business domain

Data integrity
across multiple
tables

Foreign key
constraints &
database
transaction
management

Challenges/Opportunities

Team

Building everything from scratch, including design, system setup, code

Good learning experience

Didn't have access to resources until February

Manage up!

Future Scope

Future Scope

- Inclusion of the following features :
 - Contingency Approvals
 - Project Financials
 - Contingency Parameters
 - Expense Tracking
- 
- 
- 

**THANK
YOU!**
